- behind left: rapid 3000 W

- right front: semi-rapid 1750 W

- behind right: semi-rapid 1750 W

Under-knob ignition

Security gas system

Grids in Mat finish

PRODUCT PLUSES

Safety valve

In all the burners there is a thermocouple which interrupts the gas flow in case of accidental flame extinction. The thermocouple is active in 3 seconds after the flame is extinguished and remains active even in the absence of electricity.

Under-knob ignition

The ignition under the knob allows to light the flame of the burners through an easy pressure of the knob.
